

Smart safety unit wins ‘Electrical Product of the Year’

05 December 2018

The Electrical Industries Federation of Ireland (EIFI) ‘Product of The Year 2018’ has been won by the MEprotect digital protection relay from Mitsubishi Electric. The award acknowledges the contribution to safety and operational efficiency represented by the innovative new product.

The award was made at a gala event held in Dublin where leaders from the six trade associations represented by the EIFI gathered with other delegates to promote the interests of firms, corporations and bodies engaged in the electrical and electronic industry within Ireland.

In order to win the award, the team at Mitsubishi Electric Ireland had to submit two rounds of supporting information before making a final presentation to a panel of five expert judges.

Ciaran Moody, General Manager Mitsubishi Electric Ireland, commented, “We were really pleased to win the award for this product, we have championed it because it offers something genuinely new and beneficial to a wide range of applications in all industries.

“We are used to safety relays that cut power connections quickly to protect people and equipment, however our product can take this so much further.” said Ciaran, “It can be used to predict issues before they happen and will even connect through to mobile devices to provide updates and warnings to key people, wherever they are”.

This level of maintenance sophistication has not been available from a relay and its associated IO modules before. Smart devices are seen as the future and this one fits in very well with the company's general factory automation and electrical management products.
