

ION/CME® N-Series Digital Drives

ION/CME N-Series Digital Drives are compact, PCB-mountable versions of PMD's ION Digital Drive family that provide high performance motion control, network connectivity and amplification. Three power output levels are available - 75, 350, and 1,000 Watts. All IONs can drive DC Brush, Brushless DC and step motors, and are ideal for medical, mobile, scientific, semiconductor, and other automation applications.

Powerful Features

N-Series IONs provide high power density in a patented ultra-rugged form factor. They perform profile generation, servo compensation, stall detection, field oriented control, digital torque control and many other motion control functions. Additional features include Ethernet, CAN, serial, and SPI (Serial Peripheral Interface) communications.

Time to Market Breakthrough

N-Series IONs represent a new paradigm for building application specific controllers. Instead of designing boards from the ground up with dozens or hundreds of IC components, plug and play N-Series ION modules allow fully functional custom boards to be designed and produced in weeks instead of months or even years.

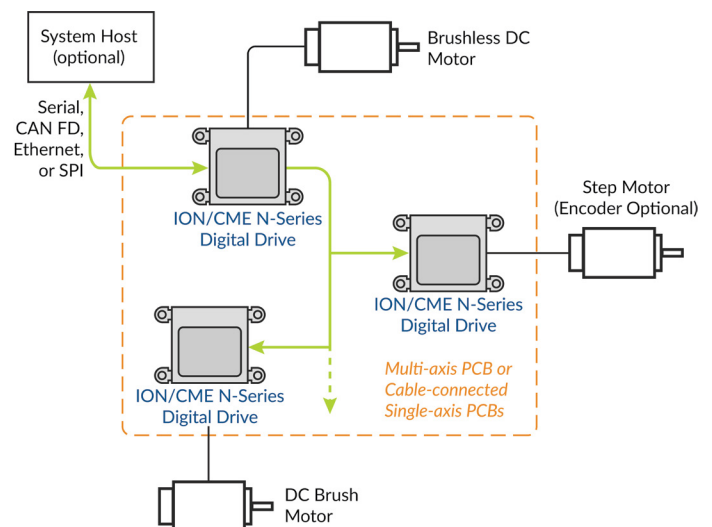

Easy to Use and Program

Working with PMD's powerful Pro-Motion® Windows-based GUI makes it easy to graph and analyze motion control performance, while the onboard C-Motion® Engine allows users to directly run their application on the N-Series ION. Most importantly, at the core of every ION/CME N-Series Digital Drive is a PMD Magellan Motion Control IC, guaranteeing software compatibility and insuring performance and reliability second to none.

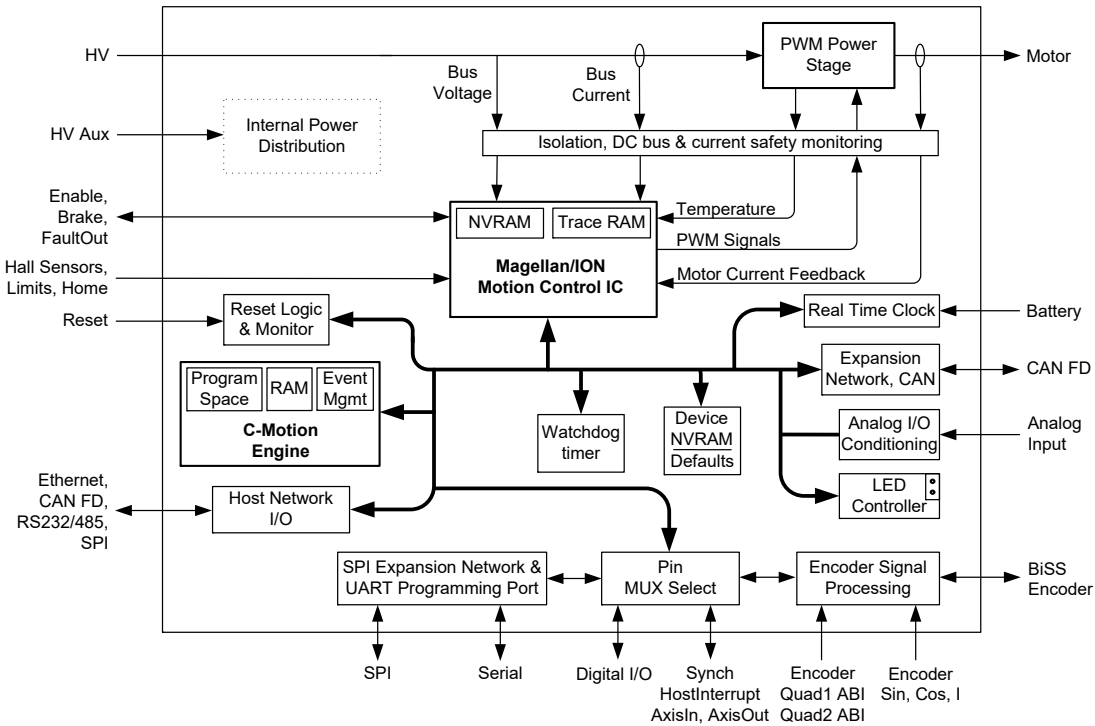

FEATURES

- DC Brush, Brushless DC and step motor versions
- Ethernet, CAN FD, serial or SPI host communications
- Fully user programmable
- S-curve, trapezoidal, velocity contouring, electronic gearing profiles
- 75 W, 350 W, or 1,000 W power rating
- Up to 20 A continuous output
- 12-56 V single power source
- 20, 40, 80 and 120 kHz PWM frequency
- 20 kHz servo loop rate
- Auxiliary encoder input supports cam, gearing and dual loop applications
- Dimensions: 1.48" x 1.48" x 0.66" (38mm x 38mm x 17mm)
- Patented ultra-rugged PCB-mountable package
- Autotuning for easy setup
- Supports quadrature, sin/cos, BiSS-C encoders
- FOC (Field Oriented Control)
- Sinusoidal commutation
- Stall detection
- Programmable acceleration and deceleration
- Advanced PID filter with velocity and acceleration feedforward
- Programmable dual biquad filters
- +/- 10V high resolution 16-bit ADC input
- 8 general purpose bi-directional I/O's
- Execution of user code at up to 418 MIPS
- 256 KB of programmable user code space
- 256 KB user application RAM space

CONFIGURATION

Technical Overview

SPECIFICATIONS

Parameter	Value
Supported Motor Types	Brushless DC, step motor, DC Brush
Power levels available	Low (75 W), Medium (350 W), High (1,000+ W)
Voltage input	12-56V
Profile modes	S-curve point-to-point, trapezoidal point-to-point, velocity contouring, electronic gear, user defined
Position loop	PID with velocity & accel feedforward and dual biquads
Current loop	PI with FOC (Field Oriented Control)
Position loop rate	Up to 19.53 kHz (user programmable)
Current loop rate	19.53 kHz
PWM frequency	20 kHz, 40 kHz, 80 kHz, 120 kHz
Multi-axis synchronization	<1 uSec using Synch signal
Host communication	CAN FD, Serial (RS232, RS485, RS422), Ethernet 100 Base-T, SPI (Serial Peripheral Interface)
Additional communication	Expansion CAN, Expansion SPI
Encoder formats supported	Quadrature, sin/cos, BiSS-C, pulse & direction
Quad encoder rate	40 MCounts/sec
User program NVRAM	256 KB
Multi-tasking	Yes, up to 16 tasks
C-Motion Engine speed	428 MIPS
General purpose I/O	8 bi-directional digital I/Os, 1 analog input (16 bit A/D)
Drive safety features	Over current, over temperature, over/under voltage, i2T current foldback, brake signal, shunt control

MECHANICAL DIMENSIONS

Model	Length (L)	Width (W)	Height (H)
All Units	1.479 (in) 37.6 (mm)	1.479 (in) 37.6 (mm)	0.663 (in) 16.8 (mm)

RATINGS

Model	Low Power Units	Medium Power Units	High Power Units
Brushless DC current, continuous	1.5 Arms	5.5 Arms	14.8 Arms
Brushless DC current, peak	3.8 A	14.0 A	33.0 A
Brushless DC power, continuous	103 W	379 W	1,018 W
Step motor current, continuous	1.5 Arms	5.0 Arms	13.4 Arms
Step motor current, peak	3.8 A	14.0 A	33.0 A
Step motor power, continuous	119 W	396 W	1,064 W
DC Brush current, continuous	1.5 A	7.1 A	19.0 A
DC Brush current, peak	3.8 A	14.0 A	33.0 A
DC Brush power, continuous	84 W	396 W	1,064 W

SAFETY AND COMPLIANCE

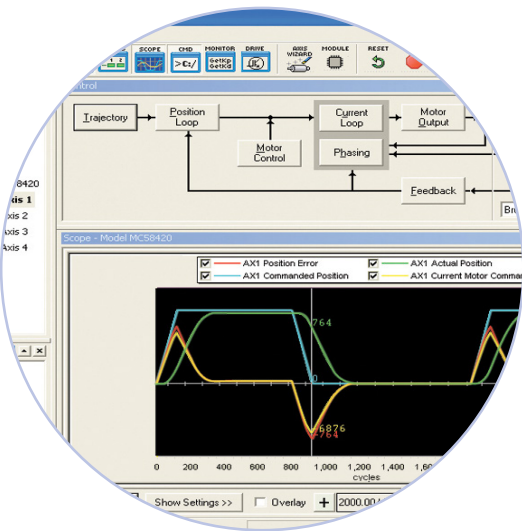

Specifications	Standard
CE	LVD: EN60204-1, EMC-D: EN61000-6-1, EN61000-6-3, EN55011
Electrical safety	Designed to UL508C, UL840 and EN60204-1
Flammability	UL94-HB
Enclosure	IP20

Development Tools

1 EASY START-UP Developer Kit

INCLUDES

- N-Series ION Developer Kits available
- Pro-Motion software
- Software Development Kit (SDK) with C-Motion
- Complete manual set
- Complete cable and prototyping connector set

2 TUNE & OPTIMIZE Pro-Motion® GUI

Pro-Motion is a sophisticated, easy-to-use Windows-based exerciser program for use with PMD motion control ICs, modules, and boards.

FEATURES

- Motion oscilloscope graphically displays processor parameters in real-time
- Autotuning
- Ability to save and load settings
- Axis wizard
- Distance and time units conversion
- Motor-specific parameter setup
- Axis shuttle performs programmable motion between two positions
- Communications monitor echoes all commands sent by Pro-Motion to the board
- Advanced Bode analysis for frequency machine response

3 BUILD THE APP C-Motion®

C-Motion is a complete, easy-to-use, motion programming language that includes a source library containing all the code required for communicating with PMD motion ICs, boards, and drives.

FEATURES:

- Extensive library of commands for virtually all motion design needs
- Develop embeddable C/C++ applications
- Complete, functional examples
- Supports serial, CAN, Ethernet, SPI, and PC104 communications

```
code for executing a profile and tracing...
on captured in this example could be used to
e trace buffer wrap mode to a one time trace
TraceMode(hAxis1, PMDTraceOneTime);
set the processor variables that we want to capture
SetTraceVariable(hAxis1, PMDTraceVariable1, PMDAxis1,
SetTraceVariable(hAxis1, PMDTraceVariable2, PMDAxis1,
SetTraceVariable(hAxis1, PMDTraceVariable3, PMDAxis1, P
// set the trace to begin when we issue the next update command
SetTraceStart(hAxis1, PMDTraceConditionNextUpdate);
// set the trace to stop when the MotionComplete event occurs
SetTraceStop(hAxis1, PMDTraceConditionEventStatus,
PMDEventMotionCompleteBit, PMDTraceStateHigh);
SetProfileMode(hAxis1, PMDTrapezoidalProfile);
set the profile parameters
SetPosition(hAxis1, 200000);
SetVelocity(hAxis1, 0x200000);
SetAcceleration(hAxis1, 0x1000);
SetDeceleration(hAxis1, 0x1000);
SetMotion
);
```

PMD PRODUCT FAMILY OVERVIEW
