

Emissco boosts capacity with innovative aerosol filling line investment

11 April 2023

Emissco, a full-service aerosol and liquid product manufacturing company based in Staffordshire, has upped the ante with the launch of its new automated filling line. The new high-capacity aerosol line, worth £200,000, enables Emissco to scale production according to customer demand. With an overall capacity of over 16 million cans per year, Emissco is ready to take on the world!

Founded as a start-up just over four years ago, Emissco has experienced immense success, winning major contracts both nationally and internationally. With customers in Europe, the Middle East, and new potential in the USA, the new high-capacity aerosol line will allow the company to meet growing demands while maintaining its commitment to providing market-leading solvents, greases, and water-based solutions.

"With a total equipment value of £200,000, our new high-capacity aerosol line is taking our business to the next level. This investment means we can offer our customers more, and faster than ever before. We're excited to bring this new line into operation and look forward to delivering market-leading solutions to customers around the world." commented Wayne Johnson, Operations Director at Emissco.

The inclusion of multiple gassing heads and an automated valve applicator on the new line provides Emissco with the flexibility to meet market demand and minimise

lead times, providing an even more responsive and effective service. These features allow for an additional output of over 8 million cans per year. This significant expansion forms part of the business's robust growth plans, and more investments are expected in the future.

In addition to its comprehensive product development, formulation, manufacturing, packaging, labelling, and distribution services, Emissco offers a range of ready-made formulations that can be easily rebranded, providing customers with a fast and cost-effective method to launch new products or expand existing ranges.
