

Portescap to Unveil Frameless Motors and System Solutions at Medical Device & Manufacturing Minneapolis 2023

12 September 2023

Portescap, a global leader in miniature motors for the medical industry, is excited to announce its participation in Medical Design & Manufacturing (MDM) Minneapolis 2023, taking place October 10-11, 2023, at the Minneapolis Convention Center. Attendees are invited to join us at Booth #3312, where we'll be highlighting our frameless motor capability and expertise in micro motion systems.

Portescap is thrilled to share our newest motion innovation, the frameless motor, which meshes our extensive experience in motion control with the latest demands from surgical robotic developers. This new capacity for providing un-housed rotors and stators is a direct result of recognizing that robot developers require the greatest flexibility and control to minimize weight and space while simultaneously optimizing performance.

We're equally excited to highlight our Ultra EC™ BLDC motors for use in cardiovascular markets, as well as our sterilizable brushless DC motors and controllers which have been optimized for use in Surgical Hand Tools.

"MDM Minneapolis presents an excellent opportunity for Portescap to engage with other industry leaders, showcase our latest developments, and demonstrate how our motion solutions can continue to elevate the capabilities of our customers'

medical devices," said Greg Harnsberger, Director of Medical Markets at Portescap. "We're looking forward to meeting with attendees and discussing the impact our technologies can have on the medical market."

Portescap's participation at MD&M Minneapolis 2023 underscores our dedication to advancing medical devices through innovative motion technology. To schedule a meeting with the team at MD&M Minneapolis 2023 or for general inquiries, please email us at portescap.marcomrequest@regalrexnord.com.

About Portescap

Portescap offers the broadest miniature and specialty motor products in the industry, encompassing coreless brush DC, brushless DC, stepper can stack, gearheads, digital linear actuators and disc magnet technologies. Our products have served diverse motion control needs in a wide spectrum of applications including medical, life science, instrumentation, automation, aerospace and commercial for more than 70 years.

Portescap has manufacturing centers in the United States and India and utilizes a global product development network with research and development centers in the United States, China, India and Switzerland.
