

Spelsberg UK further reduces lead times with assembly service investments

20 June 2024

Spelsberg UK is thrilled to announce a significant investment in its in-house assembly service, further enhancing its capabilities to meet the growing demand for out-of-the-box enclosure solutions. This strategic expansion aims to increase productivity and significantly reduce lead times, ensuring faster and more efficient service for OEMs and electrical installers.

The extended assembly area increases production line capacity for product assembly, as well as housing bespoke printing machines and a packing area. With a focus on quality and efficiency, the new setup is designed to handle a higher volume of orders while maintaining the high standards that Spelsberg UK is known for.

The Spelsberg assembly service typically includes the installation of electrical terminals and wiring, but can also include virtually any customer-specified item that requires protection. Managing the assembly process also involves specification and procurement of ancillary components, R&D and testing, as well as final certification and packing. This represents real added value to Spelsberg UK customers.

“This expansion represents the latest in a long series of investments which have elevated Spelsberg UK’s status beyond that of an ‘enclosure supplier’ and into an ‘engineering partner’ for our clients” explains Chris Lloyd, Managing Director. “By supplying pre-assembled solutions out of the box, we are able to significantly reduce on-site installation times for our customers and help them maintain a competitive edge in a very tough market.”
