

TIC and Spelsberg partnership presented on new website

09 December 2025

Industrial controls specialist TIC and industrial enclosure manufacturer Spelsberg have entered a new partnership, jointly providing their services in a combined approach. TIC is presenting Spelsberg's industrial enclosures on its new e-commerce website, tic-direct.com, enabling fast and simple product selection and purchase. The new partnership also offers complete industrial control solutions protected by durable enclosures that can be customised for specific requirements.

TIC provides industrial control and automation products and complimentary engineered services UK-wide to machine builders, switchgear builders, panel builders, and system integrators. The company also has established partnerships with equipment end users in industry, and its products and services span multiple sectors, from manufacturing through to agritech.

The new partnership with Spelsberg means that TIC can specify and provide complete industrial control systems with the protection of highly durable, non-metallic enclosures. TIC and Spelsberg are working together on key projects to provide combined engineering expertise and offer complete solutions, designed for specific application requirements.

TIC provides products including instrumentation, power distribution, automation, control, and safety. The industrial control specialist's new e-commerce website presents its full product range, including industrial enclosures by Spelsberg. The online portal displays enclosure models including the Spelsberg TK, manufactured

from high-strength polycarbonate with IP66 protection, as well as the Spelsberg Geos, for harsh, industrial and outdoor applications, featuring IK09 impact resistance.

Engineering expertise is TIC's key strength, including its ability to provide advice on system design and product specification. This ranges from IT/OT layer connectivity with Ethernet switches, to industrial PCs, PLCs, and I/O, through to edge devices including field sensors.

The new partnership between TIC and Spelsberg also adds industrial enclosures, which can be specified to house specific device designs and provide protection to meet key industrial requirements. This includes Spelsberg's customisation service that features CNC machining to design and create bespoke housings. The custom offering also features on-enclosure printing that can apply branding or safety information, plus the product assembly service including the installation of electrical devices and wiring.

"TIC has had a relationship with Spelsberg for many years, but in line with the development of our range of industrial control system products, expanding the agreement into a partnership is the final stage in offering our customers a complete solution," says TIC's Engineering Manager, Andrew Turner. "For non-metallic enclosures, best suited to housing industrial control devices, Spelsberg provides the most durable solutions. Combining our engineering services with Spelsberg's product quality, supported by its customisation capabilities, means we can offer bespoke industrial control systems, protected against the challenges of the working environment."
