

Cerafiltec to showcase high-performance ceramic membrane solutions at SIWW Water Expo 2026

20 May 2026

Cerafiltec will showcase its advanced ceramic membrane filtration technology at the **Singapore International Water Week 2026 (SIWW) Water Expo**, taking place from June 16–18, 2026. Located within the German Pavilion stand **B2-K17**, the company will welcome visitors to explore how its solutions enhance performance across diverse applications, from industrial wastewater treatment to high purity end water use.

At the core of Cerafiltec's offering are flat-sheet ceramic membranes engineered for durability and consistent high performance. Compared to conventional polymeric alternatives, these membranes offer up to five times longer service life while enabling lower energy use, reduced plant footprint, and optimized operating costs, delivering clear advantages from both CapEx and OpEx perspectives.

A live filtration demonstration at the booth will give visitors a hands-on view of the technology in action. Designed with a modular approach, the system enables flexible plant configurations and straightforward scalability, while maintaining resilience under demanding operating conditions. This robustness makes ceramic membranes a reliable solution for both municipal and industrial applications where performance and longevity are critical.

The SIWW Water Expo is a global platform for advancing innovative water, coastal, and flood management solutions. It brings together industry leaders, utilities, and technology providers to address pressing urban water and climate challenges, particularly across Asia.

“Ceramic membrane technology is becoming an essential part of the next generation of water treatment solutions,” said Torsten Wintergerste CEO at Cerafiltec. “SIWW provides a valuable opportunity to connect with industry peers and demonstrate how robust, high-performance filtration can support more sustainable and efficient water management.”

Visitors are invited to meet the Cerafiltec team at B2-K17 in German Pavilion to discuss specific project needs and discover how ceramic membrane technology can contribute to long-term, resilient water strategies.

About SIWW

Driving the Future of Water Innovation in Asia

As a cornerstone of SIWW, the Water Expo serves as the pre-eminent marketplace for the latest urban water technologies, innovation, and solutions tailored for municipal and industrial water users across Southeast Asia. Organised by Messe München in cooperation with IFAT, the Expo showcases state-of-the-art technologies, products, and services supporting cities, utilities, and Asia's rapidly expanding water industry.

Returning for its 11th edition, SIWW2026 Water Expo remains Asia's leading platform for water technology, innovation, and sustainable water management. Held from 16–18 June 2026 at Sands Expo & Convention Centre, Marina Bay Sands, Singapore, it will bring together solution providers, utilities, and investors from across Southeast Asia and beyond.

Positioned at the centre of Asia's evolving water economy, the Expo connects the full water value chain—from urban and industrial water management to digital solutions, advanced treatment, reuse, desalination, and climate-resilient flood and coastal protection. Visitors can also gain insights from forums and main stages focusing on water security, infrastructure financing, industrial applications, and the digital transformation of the sector.

As a key business platform, SIWW2026 Water Expo offers opportunities to explore partnerships, source practical solutions, and access Southeast Asia's growing water and wastewater markets. Whether you are showcasing innovative technologies or discovering solutions for circular and climate-resilient cities, this is where collaboration drives progress towards a sustainable water future.

About CERAFILTEC

Cerafiltec is a global leader in ceramic ultrafiltration membrane technology, leading a new **Ceramic Era** in redefining water filtration technology. Delivering advanced ceramic membrane for ultrafiltration, engineered to withstand the harshest operating conditions while ensuring superior performance, reliability, and longevity.

By combining cutting-edge engineering with sustainable innovation, Cerafiltec globally supports industries and municipalities achieve cleaner water, increased plant efficiency, lower operational costs, and long-term environmental resilience.

Driven by the vision of a water-secure planet, Cerafiltec is transforming the future of water and wastewater treatment through the power of the **Ceramic Era**.
