

Only a Few Weeks to Go Until WEFTEC 2026!

24 August 2026

Cerafiltec is heading to WEFTEC 2026 to showcase how ceramic flat membrane technology can help build more resilient, efficient, and sustainable water infrastructure across the United States and beyond.

The countdown to **WEFTEC 2026** is on. From **September 26–30**, water professionals, utilities, engineers, technology providers, and industry leaders from across the United States and around the world will gather in **New Orleans** to exchange ideas and explore the innovations shaping the future of water and wastewater treatment.

Cerafiltec will be part of that conversation. Visit us at **Booth 2662 in the Circular Water Economy Pavilion** to discover how our ceramic flat membrane technology is addressing some of today's most pressing treatment challenges. You'll also find Cerafiltec featured in the **Innovation Pavilion**, alongside technologies pushing the boundaries of what is possible in water treatment.

Across the U.S., utilities and industries are facing a changing water landscape. More variable source water, aging infrastructure, stricter requirements, water scarcity, and growing pressure to control operating costs are increasing the demand for treatment solutions that deliver not just performance today, but reliability for the long term.

Ceramic membranes are designed with that future in mind. Their resistance to abrasion, aggressive cleaning, and demanding operating conditions provides a robust filtration platform engineered for long service life, helping operators reduce replacement needs, improve process stability, and achieve greater lifecycle value.

At Cerafiltec, however, it is about more than the membrane itself. By combining ceramic flat membrane technology with application-specific process engineering, we develop solutions tailored to the realities of each water source and treatment objective, from drinking water and wastewater reuse to desalination and challenging industrial applications.

Join us at WEFTEC 2026 in New Orleans and discover a different approach to filtration, one built around durability, longevity, and lifecycle performance.

About Cerafiltec

Cerafiltec is a global leader in ceramic ultrafiltration membrane technology, leading a new Ceramic Era in redefining water filtration technology. Delivering advanced ceramic membrane for ultrafiltration, engineered to withstand the harshest operating conditions while ensuring superior performance, reliability, and longevity.

By combining cutting-edge engineering with sustainable innovation, Cerafiltec globally supports industries and municipalities achieve cleaner water, increased plant efficiency, lower operational costs, and long-term environmental resilience.

Driven by the vision of a water-secure planet, Cerafiltec is transforming the future of water and wastewater treatment through the power of the Ceramic Era.
