Spelsberg UK launches a new online Electrical Enclosure Answers resource to provide information and advice from real-life experts

29 October 2026

Enclosure Answers is a one-stop-shop for helpful, reliable advice about enclosures for installers and specifiers. With genuine answers to over 100 top questions from active industry professionals, it's a useful place to find solutions that work for real-world projects.

https://www.enclosureanswers.com/

The resource started life as a simple Q&A page where professionals could ask for advice and check answers to common questions from one of Europe's leading manufacturers of electrical enclosures. It soon became clear that many specifiers and installers were experiencing similar issues, so Spelsberg UK decided to turn the page into a resource library that anyone could access. The goal was to make every installation as efficient and reliable as possible by sharing best practice and knowledge.

The refreshed Enclosure Answers site brings together more than 100 real questions and answers, backed by a searchable database of proven solutions and specifications. Users can find help about materials, sizes, protection ratings, test certificates and more, or ask a question about their own project and receive advice from a real UK-based expert.

The human touch

From domestic installations to large industrial construction projects, and from protected indoor sites to the most challenging outdoor and offshore applications, the Enclosure Answers resource aims to make specialist help for installations easier to access by sharing knowledge that has helped in similar projects.

The company is at pains to point out that the people behind the answers are real and not AI or AI assisted, they are based at the UK headquarters in Telford. The company has over 120 years' experience in enclosure manufacture and design, and its manufacturing facility in Germany operates an in-house testing facility with both UL and VDE accreditation. This depth of expertise means recommendations can make every installation more efficient and reliable.

Enclosures are often a focal point in an installation, but they can be overlooked during the design process. Spelsberg UK's goal is to help designers and installers to ask the right questions early in the process in order to specify the most appropriate solutions for every project, ultimately improving performance and reducing project costs.

The Enclosure Answers site and service is free to use, with no login or registration required. The resource is available at: https://www.enclosureanswers.com/
